Building student-led underwater robotics at McMaster

STUDENT-LED

ROV DESIGN

ENGINEERING

Team Overview

ABOUT US

The McMaster Underwater Robotics Team is a student-led engineering team focused on designing, building, and testing a remotely operated underwater vehicle (ROV). The team brings together students from software, electrical, mechanical, and computer engineering to solve real robotics problems through hands-on design.

MISSION

Provide students with practical engineering experience beyond the classroom while promoting innovation in robotics, marine technology, and STEM education.

APPROACH

Design, prototype, test, and improve a working underwater system through teamwork, documentation, and reliable engineering practices.

WHY IT MATTERS

- Students gain experience with embedded systems, controls, waterproof design, manufacturing, and software integration.
- Sponsors help fund real hardware, testing resources, and outreach opportunities.
- The project creates a bridge between classroom theory and industry-style engineering work.

DESIGN / BUILD / TEST / LEARN

The ROV Project

We are developing an underwater ROV capable of maneuvering below the surface, transmitting camera feedback, and completing task-oriented operations through an integrated mechanical, electrical, and software system.

CORE SYSTEMS

Mechanical

Custom frame, waterproof housings, mounting structures, and serviceable design.

Electrical

Power distribution, motor control, sensors, cameras, and safe wiring practices.

Software

Driver controls, monitoring tools, automation support, and system integration.

Testing

Pool testing, waterproofing checks, debugging, and reliability improvements.

2026 BUILD GOALS

- Complete a reliable first ROV platform.
- Validate waterproof electronics and enclosures.
- Develop repeatable pool testing procedures.
- Prepare for engineering showcases, outreach, and future competitions.

Why Partner With Us

Sponsorship directly supports student learning, technical development, and the materials needed to turn an underwater robotics concept into a working system.

Talent Access

Connect with students interested in robotics, automation, embedded systems, manufacturing, and software.

Brand Visibility

Gain recognition across team materials, presentations, digital channels, and engineering events.

Education Impact

Support hands-on learning that helps students develop practical technical skills.

Community Value

Help grow a McMaster team that can support STEM outreach and design culture.

FUNDING PRIORITIES

- ROV frame, waterproofing, and mechanical components
- Thrusters, motor controllers, and wiring
- Cameras, sensors, and control electronics
- Testing, prototyping, and competition costs

Sponsorship Levels

We offer flexible sponsorship levels so partners of different sizes can support the team and receive meaningful recognition.

LEVEL	CONTRIBUTION	RECOGNITION
Bronze	\$250+	Website and social media recognition; logo included in sponsor materials.
Silver	\$500+	All Bronze benefits; logo on team presentation slides; recognition at showcases.
Gold	\$1,000+	All Silver benefits; medium logo placement on the ROV or team display; featured sponsor spotlight.
Platinum	\$2,500+	All Gold benefits; large logo placement on ROV, display, or apparel; tech talk or recruitment opportunity.
Title	\$5,000+	All Platinum benefits; top-level logo placement across sponsor materials; recognized as a major team partner.

Custom and in-kind sponsorship opportunities are available.

In-kind support is recognized based on estimated contribution value.

In-Kind Support

In addition to financial sponsorship, we welcome materials, services, mentorship, and technical resources that help us build and test the ROV more effectively.

HELPFUL CONTRIBUTIONS

- Materials such as aluminum, acrylic, plastics, fasteners, and waterproof components
- Electronics, sensors, cameras, batteries, and microcontrollers
- Machining, 3D printing, laser cutting, and manufacturing support
- Software licenses, testing resources, storage, and safety equipment
- Engineering mentorship, design reviews, facility tours, or guest technical talks

PARTNERSHIP PROCESS

- | | | |
|-----------|------------------|---|
| 01 | Connect | Reach out to discuss the type of support your organization can provide. |
| 02 | Align | We match your sponsorship with the appropriate recognition level. |
| 03 | Build | Your contribution supports ROV development, testing, and outreach. |
| 04 | Recognize | Sponsors are acknowledged through agreed-upon team channels. |
-

Partner With Us

Let's build something impactful together.

Thank you for considering a partnership with the McMaster Underwater Robotics Team. Your support directly helps students design, build, test, and compete with a real underwater robotics system while developing skills that shape the future of engineering.
